

REMOTE AUDIO/VISUAL ALARM

Model TAV-1 shown above

Features:

- High intensity LED display
- Loud audible alarm buzzer rated at 90 DB @ 2 feet
- Panel may be flush or back mounted
- Durable plastic case
- Solid state components
- Plugs into any electrical outlet

Specifications:

Remote Audio/Visual Alarm is specially designed to provide warning of cylinder depletion for one or two gas manifold systems. The visual portion of the alarm will change from a “green” indicator for normal operation to a “red” indicator for depleted cylinders. Once the system is repressurized, the indicator lights will return to the normal “green” position. When the cylinders are depleted, the alarm buzzer will automatically sound. A reset button conveniently located on the front of the unit will deactivate the alarm buzzer. Used in conjunction with a pressure switch, alarm is supplied with a transformer (125 VAC x 15 VDC) that plugs into any outlet and a six-foot cord that goes from the transformer to the alarm. Ideal for industrial, medical, and specialty gas use.

Part Number	Description	Dimensions
TAV-1	Single gas Remote Audio/Visual Alarm	6” H x 3” W x 2” D
TAV-2	Two gas Remote Audio/Visual Alarm	6” H x 6” W x 2” D
